

# PLASTIC CURRENTS

Can you rid the ocean of plastic?

You need: one die  and about twenty jellybeans 

## How to Start

Put one jellybean on each square.  
This is the plastic you need to remove.

## Adding plastic

For example, if you had plastic in these squares:

	A	B	C
1			
2			
3			

Then for each of these currents you'd add one to each of these squares:

-  A1, C1, C3
-  B3, C3
-  A1, A2, A3
-  B1, C1
-  C1, C2, C3
-  A3, C3, C1

## How to Play

- Roll for the current. The die and direction look like this:
  -  Roll One = clockwise (the centre stays still)
  -  Roll Three = current goes right
- "Net" one square by placing the die on it. Any plastic entering or leaving this square is caught and removed. (HINT: try to clear whole rows or columns, not the most plastic.)
- Enact the current - move each individual piece of plastic one square in the direction of the current. It can't be pushed off the edge.
- Add one extra piece of plastic to the first square of every un-cleared row or column in the direction of the current. (See example. This is up to four pieces for currents 1 and 6, and up to three pieces for currents 2, 3, 4, 5.)

Repeat steps 1-4 until all the plastic is gone.
